

PATENT APPLICATION
IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of

Cedric LAPAILLE, et al.

Attorney Docket Q66616

Appln. No.: Unknown

Group Art Unit: Unknown

Confirmation No.: Unknown

Examiner: Unknown

Filed: October 15, 2001

For: A METHOD OF MANAGING RADIO RESOURCES IN AN INTERACTIVE
TELECOMMUNICATION NETWORK

PRELIMINARY AMENDMENT

Commissioner for Patents
Washington, D.C. 20231

Sir:

Prior to examination, please amend the above-identified application as follows:

IN THE CLAIMS:

Please enter the following amended claims:

21.(Amended) A fixed or mobile telecommunication terminal that is part of an interactive satellite radiocommunication network providing communication channels and connections to a plurality of fixed or mobile terminals severally sharing the same radio resource made available by said network, wherein communication services and resources allocated to a given terminal t_i for uplink and/or downlink transmission are managed as a function of the value for said terminal t_i of a product $\alpha^{(i)}$ of the type: $\alpha^{(i)} = \text{bandwidth } r_i \times \text{power } p_i$, wherein said terminal is adapted to implement a management method as claimed in claim 1.

AMENDMENT

Attorney Docket No. Q66616

REMARKS

Entry and consideration of this Amendment is respectfully requested.

Respectfully submitted,

SUGHRUE, MION, ZINN,

APPENDIX

VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE CLAIMS:

21.(Amended) A fixed or mobile telecommunication terminal that is part of ~~a network~~
~~as claimed in claim 18~~an interactive satellite radiocommunication network providing
communication channels and connections to a plurality of fixed or mobile terminals
severally sharing the same radio resource made available by said network, wherein
communication services and resources allocated to a given terminal t_i for uplink and/or
downlink transmission are managed as a function of the value for said terminal t_i of a
product $\alpha^{(i)}$ of the type: $\alpha^{(i)} = \text{bandwidth } r_i \times \text{power } p_i$, wherein said terminal~~and which is~~
adapted to implement a management method as claimed in claim 1.
